Other information

The Management Company shall comply with the rules and regulations of the master fund which requires reporting of unitholding of 10 per cent or more of the total outstanding units of the fund to the authorized officer of the master fund and may also submit personal information of such unitholder, for example, a copy of National ID Card and/or a copy of Passport and/or request additional information or documents from unitholders later upon request of the master fund. In case a unitholder refuses to provide additional information or documents or has a conduct deemed to be and/or an offence under the law which results in the Management Company being unable to comply with the rules and regulations of the master fund, the Management Company shall reserve the right to suspend or cease provision of services and refund the investment amount equal to the value of the units to such unitholder. In such case, the Management Company's action shall be deemed agreed by the unitholder and the unitholder shall not use such action as ground for claim of damages against the Management Company.

Sustainability Corner

(1) Types of SRI Fund and Summary of criteria for consideration	
Type of SRI Fund by Sustainable Objective	SRI Promote
Summary of Assessment Criteria	The Fund mainly invests in a master fund that is to invest in environmentally, socially and governance assets, by setting investment ratio in assets that achieve sustainability criteria of the main fund's company to achieve this objective.
The Underlying Fund / Master Fund	Allianz Dynamic Multi Asset Strategy SRI 30 (Master Fund), a fund categorized under Article 8 of the Sustainable Finance Disclosure Regulation (SFDR), focuses on investing in assets that promote environmental and social (E/S characteristics).
Management company of the Underlying Fund / Master Fund	Allianz Global Investors GmbH
Investment Objective and Policy of the Underlying Fund / Master Fund	The master fund seeks to achieve long term capital growth by investing in a broad range of asset classes, with a focus on global Equity and Bond Markets in order to achieve over medium to long-term performance within a volatility range of 4% to 10% per annum in accordance with E/S characteristics. The fund invests no less than 70% of its assets in global Equities, Bonds, Money Market Instruments, Target Funds, and/or other asset classes as described in the investment objective. Furthermore, at least 70% of funds' portfolio must be subject to assessment based on the Internal Score. except for unrated derivatives and instruments that are inherently unrated by nature (such as cash and bank deposits).
Sustainability-related Investment Objectives of the SRI Fund	The master fund is categorized under Article 8 of the Sustainable Finance Disclosure Regulation (SFDR) with a focus on investments that promote environmental and social (E/S characteristics). It targets securities with sustainable growth potential while deliver positive societal and environmental impacts, guided by globally recognized frameworks such as the United Nations Sustainable Development Goals (UN SDGs) and the UN Global Compact. Consequently, the master fund aligns with the fund's Sustainability Objectives.
(2) Sustainability Goals	
Sustainability Goals	The fund primarily invests in a master fund that promotes a broad range of sustainability characteristics across Environmental, and/or Social, and Governance. Sustainability Indicators are established to assess the achievement of the fund's Environmental and Social Characteristics objectives.
Sustainability Goals of the Underlying Fund / Master Fund	The Master Fund uses the following sustainability indicators to assess its environmental and social characteristics 1. Reduce the number of issuers in the investment universe by at least 20% through exclusion criteria, compared to the fund's standard strategic investment universe. 2. The proportion of assets achieving an internal sustainability score of 1 or above, including investments in SFDR Target Funds. 3. Percentage of Sustainable Investments. 4. Percentage of taxonomy-aligned investments.

(3) Investment Strategy (to Achieve the Sustainability Objectives)	
Investment strategies	The fund employs an investment strategy through investing in the master fund, which applies a sustainable investment strategy as follows: **Negative Screening:** Excluding securities from the investment portfolio based on negative selection criteria (Exclusion Criteria). **Positive Screening:** Select investment securities from the investable universe, excluding those already screened above. **ESG Integration:** Integrate Exclusion Criteria, internal evaluation, and global frameworks of environmental and social standards to construct an investment portfolio to comply with the defined sustainability goals.
Reasons and considerations for choosing this strategy	The fund invests through a master fund to align with its strategy and achieve the fund's sustainability investment objective.
Investment strategies to achieve sustainability objectives of the Underlying Fund / Master Fund	The master fund uses a sustainability investment strategy by promoting investments in assets that integrate Environmental, Social, and Governance criteria. This is coupled with the application of minimum exclusion criteria to screen out undesirable securities from the investment portfolio, while selecting securities with superior sustainability performance from the remaining investable universe. **Negative Screening:** The master fund will not invest in securities based on the negative screening criteria (Exclusion Criteria). **Positive Screening:** The Master Fund will select securities from an investable universe outside of those that have passed the screening above process **ESG Integration:** The master fund integrates exclusion criteria, internal assessments, and international environmental and social standards into its portfolio construction to achieve its defined sustainability objectives.
(4) Investment Universe	
Investment characteristics and investment universe	The fund primarily invests in a master fund classified under Article 8 of the Sustainable Finance Disclosure Regulation (SFDR), which focuses on investing in a diverse range of assets that promote environmental and social (E/S) characteristics.
Investment Universe of SRI Fund and Master Fund	The master fund will invest at least 70% of its net asset value (excluding cash, deposits, and unrated derivatives) to achieve its specified environmental and social objectives. In this regard, a minimum proportion of 10% of master fund's net asset will be invested in securities that promote sustainability, with a minimum proportion aligned with the EU Taxonomy of 0.01%. Overall, the Investment Manager is required to invest at least 80% of the master fund's assets in securities that have been directly assessed using the Internal Score or through SFDR Target Funds Furthermore, the master fund will not invest in companies involved in controversial environmental or social business activities or that severely violate good governance practices, principles and guidelines, such as the Principles of the United Nations Global Compact (UNGC). Furthermore, the master fund will also exclude investments in businesses involved in fossil gas and/or nuclear energy, in accordance with the EU Taxonomy criteria.

Definitions

Maximum Drawdown: The maximum percentage of loss of a fund over the past 5 years (or since inception if the fund has been established for less than 5 years). It is measured from the highest value of the fund's NAV per unit to the lowest value during the period that the NAV per unit is depreciating. The Maximum drawdown is used to assess the risk of possible loss that could occur from investing in a fund.

Recovering Period: A duration of time that let the investors know how long it will take for a fund to recover from a peak of loss to the original level of investment.

FX Hedging: Percentage of foreign currency denominated assets in the investment portfolio that are hedged against foreign exchange risk.

Portfolio Turnover Ratio: The trading frequency of assets in the investment portfolio during a certain period of time. It is calculated by taking either the total amount of new securities purchased or the number of securities sold (whichever is less) over a period of one year, divided by the average net asset value (NAV) of the fund over the corresponding period. A fund with high portfolio turnover indicates that the securities in the portfolio are frequently traded by the fund manager and hence high securities dealing cost. Therefore, investors must take into consideration the performance of the fund in order to determine the cost worthiness of such securities trading transactions.

Sharpe Ratio: A ratio between the excess return of a fund and the risk of investment. The Sharpe ratio reveals the average investment return, minus the risk-free rate of return, divided by the standard deviation of returns for the fund. The Sharpe ratio reflects the extra return that should be received by the fund to compensate the amount of risk taken in investment. The fund with a higher Sharpe ratio is considered superior to other funds in terms of management efficiency since it provides higher excess return under the same risk level.

Alpha: The excess return of a fund relative to the return of a benchmark index. A fund with high alpha indicates that it is able to beat the performance of its corresponding benchmark which is a result of the capabilities of the fund manager in selecting appropriate securities for investment or making investment in a timely manner.

Beta: A measure of the degree and direction of volatility of the rate of return of assets in the investment portfolio of the fund compared to the changes in the overall market. A beta of less than 1.0 implies that the rate of return of the fund's assets is less volatile than that of the securities in the broader market whereas a beta of greater than 1.0 implies that the rate of return of the fund's assets is more volatile than that of the broader market.

Tracking Error: An indication of how efficient the actual performance of the fund can replicate its corresponding benchmark. A low tracking error implies that the fund has the efficiency to generate a return on investment close to the benchmark return whereas the higher tracking error, the more divergence of the fund from its benchmark.

Yield to Maturity (YTM): The rate of return earned from a debt instrument that is held by the investor until its maturity date. It is calculated from the total coupon payments to be received throughout the maturity of the instrument plus the principal repayments, converted into present discounted value. The YTM is used to measure the rate of return of a fixed income fund by weighting the average yield of each debt instrument in the portfolio. Since YTM is expressed as an annual percentage, it can be used for performance comparison between different fixed income funds with a held-to-maturity investment policy which have similar investment characteristics.
