 - 50th Percentile (Median performance)
 - 75th Percentile (Bottom 25% performance)
 - 95th Percentile (Bottom 5% performance)

Detailed Explanation of Disclosures in the Prospectus

The information disclosed below is a summary of risk dimensions.

	Topic	Disclosure																																																
1	Market Risk	<p>Market risk is the risk relating to fluctuation in value of securities, the loss of which is due to the factors that affect an entire market or asset class. Market risk has different effect on different type of funds as follows:</p> <table border="1" data-bbox="416 371 1536 510"> <tr> <td colspan="8" data-bbox="416 371 1536 439">Equity Fund – The market risk is assessed based on the annual standard deviation (SD) of the fund performance.</td> </tr> <tr> <td data-bbox="416 439 555 472"></td> <td data-bbox="555 439 635 472">Low</td> <td colspan="5" data-bbox="635 439 1398 472"></td> <td data-bbox="1398 439 1536 472">High</td> </tr> <tr> <td data-bbox="416 472 555 510">SD</td> <td data-bbox="555 472 635 510"></td> <td data-bbox="635 472 783 510">< 5%</td> <td data-bbox="783 472 954 510">5-10%</td> <td data-bbox="954 472 1102 510">10-15%</td> <td data-bbox="1102 472 1251 510">15-25%</td> <td data-bbox="1251 472 1398 510">> 25%</td> <td data-bbox="1398 472 1536 510"></td> </tr> </table> <p>Equity Fund is generally exposed to the market risk when the value of the securities in which the fund deviates (increase or decrease) as a result of external factors such as economic conditions, investment climate, political factors in the issuer’s country or other country. The market risk in equity fund is expressed in terms of standard deviation (SD) – the higher the SD, the higher the market risk (due to changes in securities prices).</p> <p>The market risk of domestic equities can be determined from the type of stocks in which the fund invests.</p> <table border="1" data-bbox="416 813 1536 1014"> <tr> <td colspan="8" data-bbox="416 813 1536 943">Domestic equities – The market risk can be determined from the type of stocks in which the fund invests (approximately 80% of NAV).</td> </tr> <tr> <td data-bbox="416 943 635 976"></td> <td data-bbox="635 943 759 976">Low</td> <td colspan="5" data-bbox="759 943 1398 976"></td> <td data-bbox="1398 943 1536 976">High</td> </tr> <tr> <td data-bbox="416 976 635 1014">Type of stocks</td> <td data-bbox="635 976 759 1014"></td> <td data-bbox="759 976 884 1014">General</td> <td data-bbox="884 976 1008 1014">Large Cap</td> <td data-bbox="1008 976 1133 1014">Mid/small</td> <td data-bbox="1133 976 1257 1014">Sector</td> <td data-bbox="1257 976 1398 1014"></td> <td data-bbox="1398 976 1536 1014"></td> </tr> </table>	Equity Fund – The market risk is assessed based on the annual standard deviation (SD) of the fund performance.									Low						High	SD		< 5%	5-10%	10-15%	15-25%	> 25%		Domestic equities – The market risk can be determined from the type of stocks in which the fund invests (approximately 80% of NAV).									Low						High	Type of stocks		General	Large Cap	Mid/small	Sector		
Equity Fund – The market risk is assessed based on the annual standard deviation (SD) of the fund performance.																																																		
	Low						High																																											
SD		< 5%	5-10%	10-15%	15-25%	> 25%																																												
Domestic equities – The market risk can be determined from the type of stocks in which the fund invests (approximately 80% of NAV).																																																		
	Low						High																																											
Type of stocks		General	Large Cap	Mid/small	Sector																																													
2	High Issuer Concentration Risk	<p>This risk comes from investing more than 10% of the fund’s NAV in one issuer, party, or other person who has obligations under the instruments or the contracts.</p> <p>Concentration risk does not include investment in the following assets:</p> <p>Thai government bonds;</p> <p>Investment-grade foreign government bonds; and</p> <p>Investment-grade deposits or cash-equivalent instruments of a depository or an issuer.</p>																																																
3	Maximum Drawdown	<p>Maximum drawdown means an accumulated loss as a result of the investment in the past five years from the reporting date (or since inception if the fund has been established for less than five years). It is calculated as follows:</p> $\text{Drawdown}_{(t)} = \frac{\text{Unit value}_{(t)} - \text{Highest unit value}^*}{\text{Highest unit value}^*}$ $\text{Maximum Drawdown} = \min (\text{Drawdown}(t))$ <p>Remark: * Highest unit value means the highest value of unit in the preceding period up to the calculation date (t).</p>																																																
4	Standard Deviation	<p>Standard Deviation (SD) of Fund measures the volatility the fund's returns, using the calculation as prescribed by Association of Investment Management Companies re: Standard for Measurement and Presentation of Performance of the Mutual Funds. SD expresses the historical performance in annual percentage for the five years preceding the reporting date.</p>																																																

	Topic	Disclosure
5	Tracking Error	<p>Tracking Error (TE) is the difference between a mutual fund portfolio's returns and the benchmark index it was designed to copy. This indicates how well the mutual fund is performing against the benchmark index and shows how much the mutual fund deviates from the benchmark index. For example, if the mutual has a low TE, this means the fund has slightly deviated from the benchmark index and therefore the fund is efficient in copying the benchmark index. On the other hand, if the mutual has a high TE, this means the fund has substantially deviated from the benchmark index and therefore it is unlikely that the fund will achieve return at similar rate to the benchmark index.</p> <p>TE is used for tracking error of passive funds/ index tracking such as index fund or ETF.</p>
6	Portfolio Turnover Ratio	<p>Portfolio Turnover Ratio (PTR) is the percentage of a mutual fund or other investment's holdings that have been replaced in a given year which can better reflect the investment strategies employed by the fund manager. It is calculated by taking either the total amount of new securities purchased or the amount of securities sold - whichever is less - over the past 12-month period, divided by the total net asset value (NAV) of the fund of the same period.</p> $\text{PTR} = \frac{\text{Min (Subscription, Redemption)}}{\text{Average NAV}}$
