Risk Considerations

Besides the risks included in the risk indicator under the Risk Information section, other risks may affect the fund performance.

Currency risk - in some circumstances, you may receive payments in a different currency, so the final return you will get may depend on the exchange rate between the two currencies.

Liquidity Risk - liquidity risk is the risk that a position cannot be sold, liquidated or closed at limited cost and/or in an adequately short time frame as required to meet liabilities of the Sub-Fund. This may occur when there are insufficient buyers and sellers in the market to trade the investments readily due to market events, large redemptions and/or if the sub-fund owns a sizeable portion of a company. When a sub-fund invests in smaller companies, shares in smaller companies may also be more volatile and more difficult to sell than shares in larger companies.

Deposits default risk - deposits and money market instruments are exposed to the risk that their issuer may not be able to meet its interest payment or principal reimbursement obligations.

Operational risk - due to issues such as natural disasters, technical problems and fraud.

Emerging markets risk - emerging markets may be exposed to political, fiscal and institutional instability that creates risks associated dealing, settlement, accounting, ownership, custody as well as liquidity (including the risk of internal or external embargos on the sale or acquisition of currencies and securities).

Shanghai-Hong Kong Stock Connect and Shenzhen-Hong Kong Stock Connect risk - investments in China "A" shares via the Shanghai-Hong Kong Stock Connect and Shenzhen Hong Kong Stock Connect may entail additional clearing and settlement, regulatory, operational and counterparty risks.
