1 Annualised standard deviation

2 The tracking error (TE) is calculated using the annualized standard deviation of a portfolio's excess return over the corresponding index return. The tracking error for a defined period expressed in months is calculated as follows: = STANDARD DEVIATION (monthly excess calculated each month over period expressed in months) \* SQUARE ROOT(12 DIVIDED BY period expressed in months).

## Risks

UBS Opportunity Equity Funds invest in equities and may therefore be subject to high fluctuations in value. For this reason, an investment horizon of at least five years and corresponding risk tolerance and capacity are required. As these UBS Funds pursue an active management style, each Fund's performance can deviate substantially from that of its reference index. All investments are subject to market fluctuations. This Fund has specific risks related to Chinese investments, which can significantly increase given the specific market and market regulation.

# UBS (Lux) IS - China A Opportunity (USD) P-acc

## Glossary of key terms

### Benchmark

Index against which an investment fund's performance is measured. Also called a reference index.

### Beta

A measure of risk which indicates the sensitivity of an investment, such as an investment fund, to fluctuations in the market, as represented by the relevant benchmark. For example, a beta of 1.2 tells us that the value of an investment fund can be expected to change by 12% if the market is forecast to move by 10%. The relation is based on historical data and is only an approximation. However, the closer the correlation between the benchmark and the investment fund, the better this approximation.

### Correlation

A measure of the degree to which the price trends of various investment categories or instruments move in the same direction. The correlation quantifies the strength of the relationship as a figure between -1 and +1. The closer the coefficient is to 1, the stronger the correlation. If the coefficient is -1, the investments and the benchmark move in opposite directions. If the value is 0, there is no correlation.

### Duration

The duration represents the length of time for which capital is "tied up" in a bond investment. In contrast to residual maturity calculations, the concept of duration takes account of the time structure of returning cash flows (such as coupon repayments). The average duration of the portfolio is derived from the weighted average duration of the individual securities. The "modified duration" is derived from the duration and provides a measure of the risk with which the

sensitivity of bonds or bond portfolios to interest-rate changes can be estimated. A 1% increase (decrease) in the interest level accordingly produces a percentage fall (rise) in the price in proportion to the modified duration. For example: the modified duration of a bond fund is 4.5, the theoretical yield to maturity is 5.3%. If the theoretical yield to maturity drops in the example by 1% to 4.3% due to the decline in interest rates, the fund price increases by around 4.5%. For bond and asset allocation funds, the duration is given for all fixed-income instruments.

### Investment grade

Term used to denote securities with ratings of between BBB and AAA, indicating that their credit quality is satisfactory or good.

### Sharpe ratio

The Sharpe ratio expresses how much higher (or lower) a return an investor can expect compared to the risk-free rate of interest (e.g. interest rates on savings accounts) per unit of risk (volatility). The risk-free rate of interest varies from currency to currency.

### Tracking error

Measure of the deviation of the return of a fund compared to the return of a benchmark over a fixed period of time. Expressed as a percentage. The more passively the investment fund is managed, the smaller the tracking error.

### Volatility

In portfolio theory the risk of an investment is measured by the amount of volatility. Risk and return are directly related: Markowitz's portfolio theory posits that a higher return can only be obtained with a higher risk.

## ESG Transparency

This page provides transparency on key sustainability metrics that may be of interest to investors but are not part of the fund's investment process. The following metrics inform investors more broadly on their exposure to selected ESG topics.

### MSCI ESG Scores

Holding-weighted average (0-10)

### External fund ratings

### Weighted average carbon intensity

(tCO<sub>2</sub> equivalents per USD million in sales)<sup>1</sup>

<sup>1</sup> The fund maintains a lower weighted average carbon intensity profile than the benchmark and/or a low absolute profile (defined as below 100Mt of CO<sub>2</sub> emissions per million dollars of revenue)

### Carbon footprint

(tCO<sub>2</sub> per USD million invested)

## Glossary

**ESG** is an abbreviation for Environmental, Social and Governance (factors). These factors are used to evaluate companies and countries on how advanced they are with respect to sustainability. Once sufficient data on these factors are available, they can be used to assess and compare assets and also to inform the investment process when deciding what assets to buy, hold or sell.

### UBS AM sustainability approaches applied

**Exclusion:** Strategies that exclude securities from portfolios where they are not aligned to an investor's values. Includes customized screening criteria.

**ESG Integration:** Strategies that integrate environmental, social and governance (ESG) factors into fundamental financial analysis to improve risk/return profile.

**SI Focus:** Strategies where sustainability is an explicit part of the investment guidelines, universe, selection and/or investment process

**Impact:** Strategies where the intention is to generate measurable environmental and/or social benefits ("impact") alongside the financial return.

**Voting:** Exercising shareholder rights by proxy voting on resolutions.

**Engagement:** (Pro-) actively entering in a dialogue with companies to influence material ESG topics.

**ESG Score (UBS ESG Consensus Score):** The UBS ESG Consensus Score is based on UBS-internal and independent external ESG data sources. The UBS ESG Consensus Score is industry-adjusted and is measured on a scale from 0 (lowest/worst score) to 10 (highest/best score).

**Controversy check:** Controversial Business Involvement exposure is the exposure to companies with a revenue share exceeding a certain threshold of the respective field (production). Link to our exclusion policy for more details: -> [www.ubs.com/si-exclusion-policy](http://www.ubs.com/si-exclusion-policy)

**MSCI ESG scores** are provided by MSCI ESG Research and are measured on a scale from 0 (lowest/worst score) to 10 (highest/best score). The score is based on the underlying company's exposure to industry-specific ESG risks and their ability to mitigate those risks relative to their peers. ESG scores are also shown a breakdown of the E, S and G scores, in reference to the different components that are considered for the Environmental, Social and Government pillars. The components are also rated on a scale of 0-10. Based on the individual E, S and G values, a weighted average can be calculated. This is dynamic and takes into account the direct changes of all underlying results, which affect the individual E, S and G values. The ESG Score measures the most financially significant environmental, social and governance risks and opportunities of companies. In addition, sectoral differences are taken into account through key industry specific ESG issues. This makes the ESG score a rather static

# UBS (Lux) IS - China A Opportunity (USD) – ESG Report

measure, as the relative valuation of a sector remains constant over a longer period of time.

**MSCI ESG Fund Ratings\*\*** are designed to measure the Environmental, Social and Governance (ESG) characteristics of a fund's underlying holdings, making it possible to rank or screen mutual funds and ETFs on a AAA to CCC ratings scale. MSCI leverages MSCI ESG Ratings for over 10,500 companies (19,500 total issuers including subsidiaries) and more than 760,000 equity and fixed-income securities globally to create ESG scores and metrics for approximately 56,000 multi-asset class Mutual funds and ETFs globally (as of January 17, 2022).

\*\*MSCI ESG Research LLC's ("MSCI ESG") fund metrics and ratings (the "Information") provide environmental, social and governance data with respect to underlying securities within more than 56,000 multi-asset class Mutual funds and ETFs globally (as of January 17, 2022). MSCI ESG is a Registered Investment Adviser under the Investment Advisers Act of 1940. MSCI ESG materials have not been submitted to, nor received approval from, the US SEC or any other regulatory body. None of the Information constitutes an offer to buy or sell, or a promotion or recommendation of any security, financial instrument or product or trading strategy, nor should it be taken as an indication or guarantee of any future performance, analysis, forecast or prediction. None of the Information can be used to determine which securities to buy or sell or when to buy or sell them. The Information is provided "as is" and the user of the Information assumes the entire risk of any use it may make or permit to be made of the Information.

**Weighted Average Carbon Intensity (tons CO<sub>2</sub>e /USDm sales):** The Weighted Average Carbon Intensity (WACI) measures a portfolio's exposure to carbon-intensive companies. The WACI metric provides insight into potential risks related to the transition to a lower-carbon economy because companies with higher carbon intensity are likely to face more exposure to carbon related market and regulatory

Sources: Fund holding data: UBS Asset Management; MSCI ESG Research  
\*MSCI China A Onshore (net div. reinv.)

risks. This metrics is applicable across asset classes, including fixed income, as it's not based on equity ownership basis. It's the sum product of the portfolio weights and individual carbon intensities (carbon emissions scope 1+2 / USDm sales). Data provider: MSCI ESG Research

**Carbon Footprint (tons CO<sub>2</sub>e / USDm invested):** Expresses the greenhouse gas footprint of an investment sum. The carbon emissions scope 1 and 2 are allocated to investors based on an enterprise value ownership (with inclusion of cash) approach and normalized by the current portfolio value. The Carbon Footprint is a normalized measure of a portfolio's contribution to climate change that enables comparison with a benchmark, between portfolios and between individual investments. Metric is Total Carbon Emissions expressed as per currency invested. Data provider: MSCI ESG Research

## Use of derivatives / fund of fund investments

Derivatives and fund of fund investments used in the portfolio are treated on a lookthrough basis, whereby the economic exposures to the underlying basket of securities is treated as an actual investment in the individual securities that make up this basket. This might in the case of broad market derivatives or fund of fund investments lead to minimal exposures to securities that are excluded from direct investments.

## Aggregation of ESG/Carbon data

ESG scores of holdings in the portfolio and the reference index are aggregated using their respective individual weights and ESG scores (sum product).

## Important information about sustainable investing strategies

Sustainable investing strategies aim to consider and incorporate environmental, social and governance (ESG) factors into investment process and portfolio construction. Strategies across geographies and styles approach ESG analysis and incorporate the findings in a variety of ways. Incorporating ESG factors or sustainable investing considerations may inhibit UBS's ability to participate in or to advise on certain investment opportunities that otherwise would be consistent with the Client's investment objectives. The returns on a portfolio consisting primarily of sustainable investments may be lower or higher than portfolios where ESG factors, exclusions, or other sustainability issues are not considered by UBS, and the investment instruments available to such portfolios may differ. Companies, product issuers and/or manufacturers may not necessarily meet high performance standards on all aspects of ESG or sustainable investing issues.
